Veolia launches “GreenPath Zero Carbon” offer to help its clients accelerate their decarbonization

Veolia, the world champion of ecological transformation, is launching an unprecedented global offer to help its municipal, tertiary and industrial customers build and implement their decarbonization roadmaps and adapt their business models to current and future climate challenges. The offer provides solutions to directly contribute to the achievement of the European Union’s climate targets of reducing greenhouse gas emissions by 55% by 2030¹ and becoming carbon neutral by 2050

The new offering covers the entire value chain, making it possible for customers to reduce their emissions by up to 80%. It comprises a portfolio of **100 solutions** identified in Veolia’s areas of expertise in water, waste and energy, of which 80% are existing (such as energy efficiency, fuel-switching, etc.) and 20% are innovative (CCUS, green hydrogen, etc.). The offering is based on the **GreenPath Digital Platform**, which allows customers to **measure their overall environmental performance** using tools to inventory emissions, water footprint and biodiversity and select appropriate long-term technical solutions.

Veolia can help industrial customers, for example, reduce their emissions:

- Upstream of their production processes by supplying them with recycled plastic, low-carbon fuel (recovered solid fuels), etc.
- During their production processes, by improving their energy efficiency; by replacing fossil energies with local, decarbonized/low-carbon energies; and by reducing their water consumption and related emissions.
- Downstream of their processes, by recycling their waste, recovering process energy and re-using wastewater.
- Through innovation, by developing pilot projects in key emerging areas such as hydrogen and carbon capture and storage.

*"While almost all economic and social players are committed to achieving carbon neutrality, Veolia is supporting them in this process with appropriate industrial ecology solutions. The GreenPath offer is the best of our international expertise at the crossroads of three businesses in water, waste and energy, which enables us to build decarbonization roadmaps with our clients to help them transform their business models in a sustainable way," commented **Estelle Brachlianoff, Veolia's Chief Executive Officer**. "Our job and our responsibility as the ecology of solutions ecology leader is to provide the solutions needed for our clients' decarbonization, de-pollution, resource saving and regeneration trajectories."*

About Veolia

Veolia Group aims to become the benchmark company for ecological transformation. Present on five continents with nearly 220,000 employees, the Group designs and deploys useful, practical solutions for the management of water, waste and energy that are contributing to a radical turnaround of the current situation. Through its three complementary activities, Veolia helps to develop access to resources, to preserve available resources and to renew them. In 2022, the Veolia group provided 79 million inhabitants with drinking water and 61 million with sanitation, produced nearly 48 million megawatt hours and recovered 48 million tonnes of waste. Veolia Environnement (Paris Euronext: VIE) achieved consolidated revenue of 42 885 million euros in 2022. www.veolia.com
